

Antriksh Devgan

Senior Platform Engineer

A 13-year track record at industry giants like **Bank of Queensland(BOQ), Westpac, Microsoft, GlobalLogic, and Thomson Digital**. Renowned for expertise in Azure Cloud DevOps, microservices, Docker-focused containerization, and Infrastructure solutions. Demonstrated proficiency in developing CI/CD pipelines via Azure DevOps.

Mastery of Azure DevOps services, from Pipelines and Release pipelines to Azure DevOps Board. Command over orchestration tools like Kubernetes and a solid grip on Azure policies, Key Vault, and Container Insights. Expertise extends to creating and managing Docker images in ACR, with in-depth acumen in Azure services, notably Azure Kubernetes Service, Azure Container Registry, and Azure Container Instances.

Armed with advanced skills in open-source tools, including IAC(Bicep, Terraform) and Git, ensuring the delivery of efficient solutions and support to the client.

WORK EXPERIENCE

Senior Platform Kubernetes Engineer, Oct 2024 – Present Bank of Queensland(BOQ)

- Architected and provisioning of AKS clusters using Azure Bicep, enabling self-service infrastructure for **5+ engineering squads and eliminating approximately 80% of manual deployment effort**.
- Optimized application deployment using Bicep for BOQ's core banking systems (BXP, Cloe, Payment Hub), improving release efficiency by 60%.
- Designed & developed 15+ Bicep modules based on **Azure AVMs**, ensuring 100% compliance with BOQ's security policies.
- Implemented **blue-green deployments** in AKS, reducing downtime during releases by 90+%.
- Integrated AppDynamics auto-instrumentation, improving application monitoring and reducing performance issues by 50%.
- Designed CI/CD pipelines in Azure DevOps, reducing deployment time by 40% and improving release frequency by 2x.
- Migrated legacy Azure Storage-based workloads to Azure NetApp Files, improving application storage performance by approximately 70% and reducing latency for critical banking workloads including BXP, Cloe and Payment Hub.
- Managed **Kubernetes Helm charts & CRDs**, improving application reliability and reducing misconfigurations.
- Secured application traffic with Nginx Managed Ingress and Azure Application Gateway, increasing system resilience.
- Enhanced AKS observability by integrating **Managed Prometheus & Grafana**, reducing incident resolution time by 55% from the previous quarter.

Senior DevOps Engineer April 2024 – Sept 2024 Westpac Banking Corporation

- Automated infrastructure provisioning using secure Terraform modules reduced setup time by 50% in the manual process while ensuring all deployments complied with Westpac's security and compliance frameworks.
- Facilitated sessions with internal customers to educate teams on Terraform implementation strategies, leading to a 25% increase in successful deployments while fostering greater collaboration across departments.
- Created documentation for Terraform modules, improving user understanding and support efficiency; resources accessed by over 20 team

TECHNICAL SKILLS

Azure Cloud/Engineering:

- **Azure AKS(Advanced)**
- **Azure DevOps(CI/CD)**
- **Azure Virtual Machine**
- **Azure Container Registry**
- **Azure Container Apps**
- **Azure Web Apps**
- **Azure Storage Account**
- **Azure Managed SQL**
- **Azure Postgres**
- **Azure Policies**
- **Azure Key Vault**
- **MS Defender for Cloud**

Tools and Frameworks:

- **Azure Bicep**
- **Terraform**
- **Kubernetes, CNI**
- **Palo Alto**
- **Dynatrace**
- **Git, Bitbucket, SVN**
- **Linux**
- **Docker**
- **Microservices**
- **CI/CD pipelines**
- **Microservices**
- **Containerisation**

EDUCATION

Lovely Professional University
Master of Information
Technology
June 2011 – June 2012

Bachelor of Information
Technology
August 2007 – June 2011

Certifications

- Certified Kubernetes Application Developer, Cloud Native Computing Foundation (CNCF)

members across departments, enhancing overall productivity and engagement.

- Orchestrated the integration of Terraform into existing workflows, leading to a seamless transition for 3 major projects, with a zero-downtime delivery; ensured comprehensive alignment with Westpac's governance standards.
- Streamlined Terraform module updates, enhancing version control processes and reducing update time by 60%; directly contributed to improved operational efficiency and ensured ongoing compliance with security requirements.
- Spearheaded the integration of CI/CD best practices, which streamlined deployment processes and reduced release times by 40%, enabling faster delivery of software updates and improving team productivity.
- Leveraged Jenkins pipelines to automate the provisioning and deployment of Terraform workspaces and Azure resources, enhancing efficiency and reducing deployment times.

Azure Kubernetes Engineer

July 2020 – Aug 2023

Microsoft

- Designed, deployed, managed, and supported **Azure Kubernetes Service (AKS)** clusters for enterprise workloads, troubleshooting complex Kubernetes, **Kubenet**, and **Azure CNI networking** issues to maintain reliable and highly available container platforms.
- Performed **AKS cluster upgrades** using both the **Azure Portal** and **Azure CLI**, following operational best practices and minimizing disruption to customer workloads.
- Configured and troubleshot **Kubernetes networking** and **Azure CNI**, resolving connectivity, routing, and network-related issues across distributed containerized applications.
- Designed, implemented, and supported **distributed applications and cloud infrastructure**, considering architecture, availability, reliability, scalability, and operational requirements.
- Utilized **Azure Container Instances (ACI)** to deploy and run containerized workloads without the need to provision or manage virtual machines.
- Built, stored, and managed **container images using Azure Container Registry (ACR)** and integrated ACR with **Azure Kubernetes Service (AKS)** to support efficient container image management and deployment.
- Developed and maintained **Infrastructure as Code (IaC)** using **HashiCorp Terraform** to provision and manage AKS clusters in a consistent, repeatable, and automated manner.
- Implemented and managed **Azure DevOps** capabilities including **Azure Pipelines**, **Release Pipelines**, and **Azure Boards** to support CI/CD, application delivery, deployment automation, and work-item management.
- Configured and managed **Azure monitoring and observability** using **Azure Monitor** and **Container Insights**, enabling effective monitoring of AKS workloads, cluster health, resource utilization, and application performance.
- Implemented and supported key Azure services and AKS integrations including **Azure Key Vault**, **Azure Policies**, **Container Insights**, **Application Gateway Add-on**, and **Kubernetes Ingress Controller**.
- Provided **customer-facing technical support and escalation management**, investigating reported issues, performing root-cause analysis, troubleshooting complex Azure and Kubernetes environments, and driving issues through to resolution.
- Collaborated with **Azure VM**, **Azure SQL**, **Azure Networking**, and **Product Engineering teams** to troubleshoot cross-service issues, resolve complex customer environments, and improve the overall customer experience.

- Certified Kubernetes Administrator, Cloud Native Computing Foundation (CNCF)
- Microsoft Certified Azure DevOps Engineer Expert, Microsoft
- Microsoft Certified Azure Administrator Associate, Microsoft
- Microsoft Certified: Azure Solutions Architect Expert, Microsoft
- Docker Certified Associate, Docker, Inc

- Applied extensive hands-on expertise across **Microsoft Azure, Kubernetes, AKS, ACI, ACR, Terraform, Azure DevOps, networking, monitoring, and cloud infrastructure** to support enterprise-scale workloads.

Azure Cloud Engineer

January 2017 – July 2020

GlobalLogic

- Conducted comprehensive failure analysis that identified 15 recurring issues within build processes; optimized workflows leading to a 40% reduction in build failures and enhanced overall reliability of deployment cycles.
- Managed and maintained infrastructure across platforms, including VMs, Docker, Azure, and Linux, ensuring smooth and consistent operations of cloud-based applications and services.
- Implemented and maintained Jenkins pipelines, automating the build, regression, and release processes, resulting in accelerated software delivery and continuous integration and deployment.
- Automated build processes for Docker containers and Kubernetes pods, streamlining the containerization workflow and reducing manual intervention, resulting in improved efficiency and consistency.

Cloud Engineer

July 2013 – Jan 2017

Thomson Digital

- Built and deployed Java and PHP applications on Linux systems, ensuring reliable and efficient performance of web applications in a Linux environment.
- Conducted environment sanity checks post-deployment, ensuring that the application environment was stable and ready for production use, resulting in reduced post-deployment issues and improved overall system reliability.
- Analysed production issues through rigorous RCA methodologies, identifying critical failure points; recommendations led to a 40% decrease in similar incidents, enhancing system reliability and performance for end users.
- Leveraged CronJobs for task scheduling, enabling the execution of automated tasks at regular intervals, such as periodic data backups or routine maintenance tasks, streamlining operational processes and reducing manual intervention.
